Reliable Distributor,
New & Original goods with competitive price,
1 year warranty & professional service.
Source green products from a reliable supplier
www.nanyangdz.com

We are a supplier for renowned brands of electronic components with years of sales experience. Our products are widely used in communication, computer, TV games, military, industrial and household. We have comprehensive range of products at competitive price for your selection and our in-stock is ready for your urgent sourcing. Our green products types are increasing to meet the environmental protection need.

We always insist on excellent product quality and trustworthiness, so many new buyers became our loyal customers shortly.

Corporate Vision: Establish long-term mutual benefit and maintaining corporate image by cooperating with business partner credibly.

Corporate Mission: Sustain trustful quality and comprehensive service.

Major Brands: AVX, KEMET, VISHAY, NEC, MURATA, TDK, SAMSUNG, TAIYO, YAGEO, BOURNS and so on.

We use advanced sales and service system to ensure our customer can keep pace with the market trend. Call us today!

One-Stop supplier of
Electronic Components for all industries

We supply electronic components to our customers that include makers of computers, personal electronics and mobile phones, telecommunications, industrial medical and aviation equipment manufacturers.

Experienced People
Our experienced account representatives have built strong relationships with all the key sources in the open market, which puts a host of parts at our fingertips.

Quality control
We've invested in the people, and tools that assure you will receive the highest quality.

Specialized Logistics
We only sell electronic components. So our logistics staff knows how to handle electronics, test them and ship them.

Hong Kong Intercell Electronics Co., Limited

QC Inspection System

**Step 1**
Incoming Quality Control
A. Check package (materials & integrity)
B. Check label / typing / model / barcode
C. Double-check the serial number and date of manufacture

**Step 2**
QC Engineer
A. Visual inspection, check the consistency with the original specification (check deformation and oxidation)
B. Dual detection for silk-screen
C. Acetone test

**Step 3**
Third-party testing based on customer needs
A. Solderability test
B. De-capsulation test
C. Functional test

Our Aim: Intercell pursuit quality and fulfill customers’ needs as our purpose to achieve quality commitment!

YOUR TRUSTWORTHY SOURCE FOR FLASH MEMORY, MOTHERBOARDS AND CHIPS.

Why customers keep coming back to us

Since our establishment in 1998, we have aspired to be a leading components distributor in the communications and network computer sectors. Not only do we space to provide outstanding services in procurement and logistics, but we also believe that pioneered and innovative technologies are essential to our success as a trading firm. We focus on customer satisfaction and technical excellence; we source only from reliable manufacturers to assure our buyers a competitive advantage. We endeavor to meet customers’ requirements on time and every time and this is why customers keep coming back.

We have over a decade of experience in trading flash memory, motherboards and chips. Thanks to our well connected components suppliers, we carry a good selection of brand names for customers to choose from. With our understanding of the electronics market and our experience in working with manufacturers, we are confident our products will meet your needs. Contact us today or visit our website for more details.

Our Target
Satisfying our customers, each and every time!

Our Competence
Pioneering and innovative technologies.

Our Predominance
Specializing in flash memory, motherboards and chips.

Our Vision
Mutual trust and benefits.
Established in 1997 and located in Zhong Guan Cun Science Park, Beijing Wanzhong Mechanical & Electronic Equipment Co., Ltd. is a supplier specializing in Power Module Conductor. We supply worldwide famous electronic components and carry brands from America such as VICOR, ASTEC, LUCENT, TYCO as well as power module series from Japan including LAMBDA, COSEL, TDK DC/DC. We also offer GTR, IGBT, IPM, PIM, Thyristor, Fast Recovery Diode, Rectifier manufactured by MITSUBISHI, SANREX, SANKEN, FUJI, TOSHIBA, SIEMENS, SEMIKRON, MOTOROLA, IR, EUPEC and IXYS. With the principal of trustfulness and mutual benefit, we have been providing superior quality products and quick delivery service for existing and new clients. Our professional shipping service, excellent products and competitive pricing has won high repute in international market among the industry.
Never lose the ones we love

KCS has extended its successful TraceME product line with the TM-230 module, targeted for tracking wildlife and advancing wildlife science into the Internet of Things era. The TM-230 module is one of the smallest and lightest track-and-trace units in the world. The modules’ minimum size of 29.7 x 20 mm and extremely small weight of only 3.5 grams enable tracking of very small animals e.g. endangered species and small birds. It can be attached easily to various parts of the animal. Successful field trials by wildlife science experts have proven that the unit does not affect the natural behaviour of the animal. Solar powered GPS/GPRS offer long-term accurate location data, to be connected to the Internet of Things.

LoRa™ Internet of Things

KCS has extended their successful TraceME product line with an advanced module, targeted for worldwide mobility in the Internet of Things era. The latest development of the TraceME GPS/GPRS Track and Trace module will combine the RF location-based positioning solution with the LoRa™ technology. This combination offers ‘smart objects’ being even smarter, since LoRa™ enables long range, battery-friendly communication in a wide variety of (M2M) applications. Supporting GPRS/SMS and optional 3G, Wi-Fi, Bluetooth LE, ANT/ANT+ and iBeacon™ provides easy integration with existing wireless networks and mobile apps. Other variants in the high/mid-range and budget-line will follow soon.

ANTI-THEFT module based on RF

KCS TraceME product line offers an intelligent location-based positioning solution for indoor and anti-theft applications. The solution is based on RF with an intelligent algorithm of measuring the propagation time of transmitted (proprietary protocol) signals. Unique features are: minimum size (46x21x6.5mm), weight (7 grams for fully equipped PCB) and a standby battery lifespan of more than 10 years. ‘Listen before talk’ algorithm makes it practically impossible to locate the module, which secures the valuable vehicle or asset. Supporting GPRS/SMS and optional 3G, Wi-Fi, Bluetooth LE, ANT/ANT+ and iBeacon provide easy integration with existing wireless networks and mobile apps.

Trading Safe Tips
How to secure your online transactions?

Escrow Service

Escrow service establishes a secure online trading environment. HKin.com protects Buyer and Seller by acting as a trusted third-party during the transaction and managing the payment process from beginning to end. Simply stated, Buyer receives and inspects goods before Seller is paid. On the other hand, Seller verifies payment is secured before shipment. Escrow is easy to use and you can track down the status online.

What is Top 10 Escrow Suppliers?

The Top 10 Escrow Supplier is to recognize the worthy suppliers who have successfully complete Escrow orders with less returns made in each quarter. During the times as reigning top 10 suppliers, your inventory will be distinguished by a gold icon, as well as gain additional coverage on our website, e-News and Trade Network magazine.

The 3-D printing industry – Trends and developments

The technology for 3-D printing, also known as additive manufacturing, has existed in some form since the 1980s. However, the technology has not been capable enough or cost-effective for most end-product or high-volume commercial manufacturing. Expectations are running high that these shortcomings are about to change.

Several technology trends are feeding these expectations. An emerging class of mid-level 3-D printers is starting to offer many high-end system features in a desktop form factor at lower price points. Printer speeds are increasing across the product spectrum; at least one high-end system under development could print up to 500 times faster than today’s top machines. And key patents are about to expire, a development likely to hasten the pace of innovation.

In a PwC survey of more than 100 industrial manufacturers, two-thirds were already using 3-D printing.
Most were just experimenting or using it only for rapid prototyping, which has been 3-D printing’s center of gravity for most of its history. Canalys, a market research firm, anticipates changes ahead and predicts the global market for 3-D printers and services will grow from US$2.5 billion in 2013 to US$16.2 billion in 2018, a CAGR of 45.7 percent.

Despite these trends, the 3-D printing industry faces challenges. Rapid prototyping will remain important but is not the game-changer that will expand the technology into high-volume use cases. The industry should pivot to printing more fully functional and finished products or components in volumes that greatly outnumber the volumes of prototypes produced. For example, some makers of hearing aids and dental braces have adopted the technology for finished products. In addition, 3-D printing should supplement or supplant products and components manufactured traditionally and create items that can be manufactured in no other way.

To evolve their design and manufacturing strategies, many industry sectors are using 3-D printing solutions already in the market. Technology for 3-D printing will advance through loosely coordinated development in three areas: printers and printing methods, software to design and print, and materials used in printing.

The emerging shape of the 3-D printer industry

In 3-D printing, hundreds or thousands of layers of material are “printed” layer upon layer using various materials, or “inks,” most commonly plastic polymers and metals. The many different printing technologies are generally material dependent. For instance, fused filament fabrication (FFF) is used with plastics, stereolithography with photosensitive polymers, laser sintering with metals, and so on.

3-D printing technologies

The printers must be improved in three areas to seize the opportunities that exist beyond today’s predominant use case of rapid prototyping:

Performance: Improve key performance characteristics, such as speed, resolution, autonomous operation, ease of use, reliability, and repeatability.

Multi-material capability and diversity: Incorporate multiple types of materials, including the ability to mix materials while printing a single object.

Finished products: Provide the ability to print fully functional and active systems that incorporate many modules, such as embedded sensors, batteries, electronics, microelectromechanical systems (MEMS), and others.

Today’s 3-D printers are concentrated at two ends of a spectrum: high cost–high capability and low cost–low capability. High-end printers are generally targeted at enterprises and 3-D printing service bureaus; low-end printers, which are often derivatives of open source RepRap printers, are targeted at consumers and hobbyists.

Gartner predicts that 3D printers with the value (capabilities and performance) that is demanded by businesses and other organizations will be available for less than US$1,000 by 2016. It is fair to expect that printer improvements will accelerate in the next few years, although the degree and nature of these changes will vary considerably across printing technologies and vendors.

Suzhou SEG – Your trading partner for electronic components

Suzhou SEG market is incorporated by Shenzhen SEG Holdings Ltd (SZSE:000058) and Aspect International Electronics Expo (Suzhou) Co., Ltd. With service covers the electronic components and digital products trading industry in Yangtze Delta District.

Established in 1988, Suzhou SEG becomes the biggest and comprehensive electronic market in China. Being the business pioneer and branded trading market in the industry. Suzhou SEG is headquartered in Shenzhen, which is the most cutting-edge city of China. Presently, SEG market has established branches in different cities of China, including Shenzhen, Xian, Suzhou, Zhangsha, Dongguan, Kunshan, Xiamen, Wenzhou, Jiaxing, Nanjing, Huzhou and so on. Suzhou SEG is one of the focal point of SEG market networks in Eastern China District.

Suzhou SEG market has developed 2 phases of 90,000sqm. Phase I mainly focuses on electronic components and products which covers 40,000sqm. You can find different categories and thousands of product types at Phase I including electronic components, testing and measuring equipment, electrical tools, security and surveillance system, network cable, anti-static and electronic accessories etc. Over 1,000 professional manufacturers and traders have stationed here. After years of development, the marketplace attained to provide comprehensive sourcing service for China and the annual turnover has exceed RMB20 billion.

With 50,000sqm, Phase II mainly supplies digital products. The plaza becomes the biggest 3C market in Suzhou which is facilitated by the integrated commercial centre (IT Mall). The major products and services include computer, digital products, mobile communications, arcade games, installation, consumptive materials, office equipment, network integration and maintenance service etc. Renowned corporations such as Apple, Lenovo, Asus, Dell, Aocer, HP, Canon and Samsung have already stationed here. The plaza has convergent shopping, entertainment, commercial and office into one complex. The annual sales turnover is over RMB 10 billion.

The Suzhou SEG and Digital Product Plaza has become the service support centre for industry from providing electronic components production to IT end product manufacturing. Shenzhen SEG Holdings Ltd., has been listed for more than 20 years. With professional management experience and 1,600 business partners, Suzhou SEG has been providing sourcing service for enterprises and consumers with ease.

Buy Online
Sell electronic components by just one click!

HKin.com provides high quality value-added services to cater for the needs of different buyers and suppliers. Our **Buy Now** service uses HKin.com as a sourcing platform, and fully utilizes the online function (Online Shopping) on suppliers’ existing websites.

![Image of product search and supplier contact details]

**Why should suppliers choose our **Buy Now** service?**

- Deals are closed faster
- Helps build suppliers’ brand name
- Supplier does not need to negotiate with buyer, thus reducing staff workload
- Serving buyers with different needs, thus expanding customer base
- Buyers have more trust in suppliers
- Suppliers enjoy a higher ranking on the list of search results

**Buy Now** helps HKin.com suppliers to seize business opportunities as it acts as a new sales channel to generate businesses via the HKin.com search function! If you have an updated and real-time stock inventories list, as well as a price list and e-commerce purchase functions on your website, you could kick off the Buy Now service now!

**What do you need to do after choosing our **Buy Now** service?**

You don’t need to spend extra time on it; just keep on running your business as usual. Once a potential buyer clicks the **Buy Now** service, the potential buyer would be redirected to your official website. The purchase order is solid and you can complete the transaction immediately!

**Suppliers would meet the criteria to use the **Buy Now** service if they:**

- Are interested in the Buy Now service
  - For suppliers which don’t have an existing e-commerce function, HKin.com could help them set up the page.
- Have an existing website that supports Online Payment
- Have an updated and real-time stock inventory list
- Are existing members / Join to become STRC members

For more details, please send your enquiries to cs@hkinventory.com.
TP03DA series, DC-DC converter (3W)

High performance miniature DC/DC converters having regulated outputs over the wide temperature range of -40C to 85C.

The input voltage range is 2:1 isolation is 1.5kVDC.

Continuous short circuit protection, external control and extremely small DIP packaging.

YTY Electronics Ltd [China]
An independent stocking distributor of electronics components especially active parts; specialized in obsolete electronic components as well as military ICs.

Do you feel like finding that needle in the haystack when sourcing components online?

Welcome to HKin.com
The Worldwide Sourcing Platform for Electronic Components

Search by "Supplier" keyword allows buyer to get full information of the supplier and its major selling items.

Product search displays details including product photo, part number, category, brand and supplier information.

Buy from Sellers you can trust!
Quality Assurance Program

To facilitate the smooth of functioning of quality assurance activities, we have developed and formalized a Quality Assurance Program (QAP) to ensure the suppliers achieve and maintain qualified product standard. The program is built on the basis of existing suppliers with good practices and consolidated them into a hierarchy of actions and guideline.

Warranty
Supplier provides buyers with a 30-days, 60-days or 90-days Warranty.

Authorized Reseller
The Authorized Reseller has formal business agreement between the manufacturing company or its agent.

New and Original
The supplier must provide accurate and completed product information including product code, manufacturer, date code, packing and quantity information of the new and original product.

The Quality Assurance Program is designed to cover three areas including Warranty , New and Original and Authorized Reseller . The intention is to ensure suppliers conducted business in accordance with the required standard of the program.

Featured STRC Member

Stock & Trade Reference Certificate

HKin.com Stock & Trade
Reference Certificate (STRC)
is designed to verify supplier’s
in-stock status and trade
references records.
When it comes to dealing with overseas suppliers over the Internet, buyers exercise much precaution before confirming sales contracts. HKin.com has introduced Stock & Trade Reference Certificate (STRC) to facilitate and speed up the buying process. STRC is an indication of the trustworthiness and reliability of a supplier with in-stock inventories, based upon its verified records of certified business documents, credentials, previous and present business goodwill and status.

Benefits:

- STRC offers buyers the confidence & certainty of reliable purchases.
- STRC serves as a pre-authorized credit check to ensure suppliers have in-stock inventories and positive trade references.
- STRC tag is conspicuously displayed in search result pages for instant identification.
- STRC enables buyers directly contact sifted supplier with in-stock and credibility.

Value-added Services

We have been continuously striving to provide value-added services to further enhance buyers' protection and confidence in trading online.
